VCS Repository (GitHub)

https://github.com/Cooper4President/cmm.git
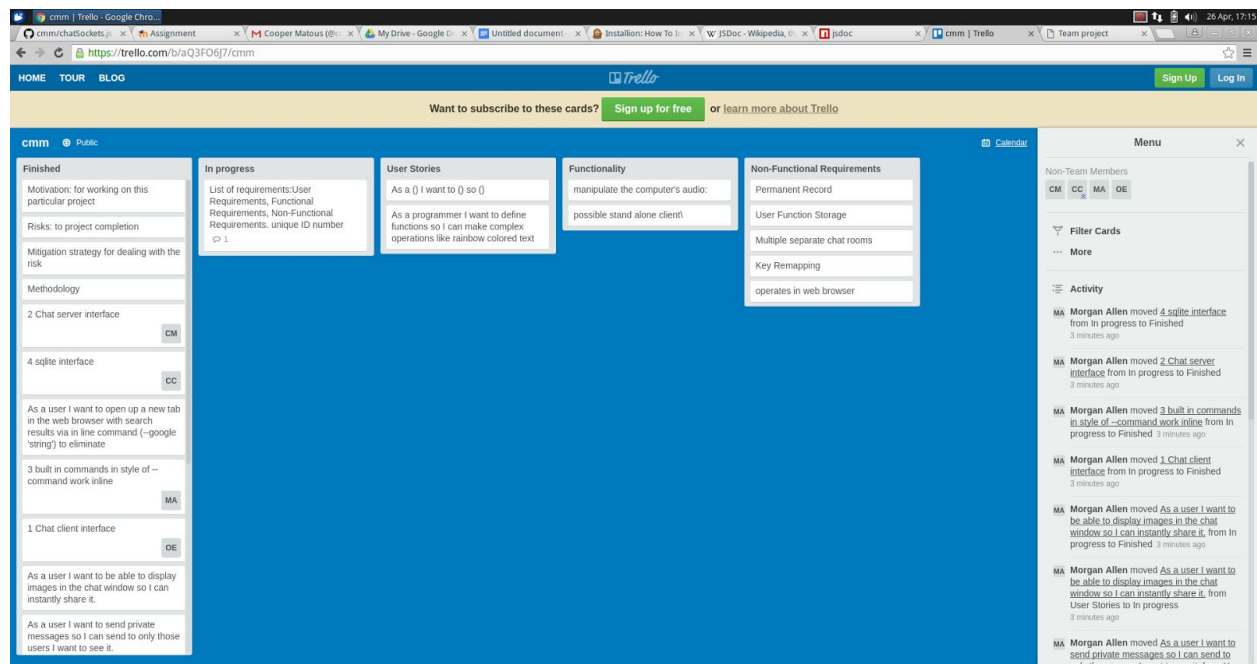

Contributions

There were some troubles with the contributions, so this graph is not accurate. We accidentally uploaded all of the npm and bower dependencies to the repo at one point, which caused several hundred thousand extra commits. Also, a lot of work was done on separate branches and regularly merged in, without direct contributions to master.

Deployment

Download the repository, install node and bower
sudo apt-get install node
npm install -g bower
Make

To use locally direct your web browser to localhost:3000
To use over LAN direct to the hosts IP:3000

Auto Documentation

Used JSDoc as an auto documentation. Html files are included in the JSDoc folder of the GitHub project.
